

Formech & The German Malaysian Institute

In partnership with Akademi CadCam, Formech installs a large format vacuum forming machine at the German-Malaysian Institute. The German-Malaysian Institute is the leading technical University in Malaysia, situated in Kuala Lumpur.

Following installation and commissioning Formech conducted a 3 day training course for the GMI tutors and technicians covering all aspects of safe machine operation and vacuum forming processes. Material choice and applications, tooling design, trimming and hands on testing were all part of a comprehensive and engaging training programme.

With extensive experience in education, Formech training programmes are designed to fully equip tutors and students with essential knowledge and valuable tips to extract the best possible performance from their machines.

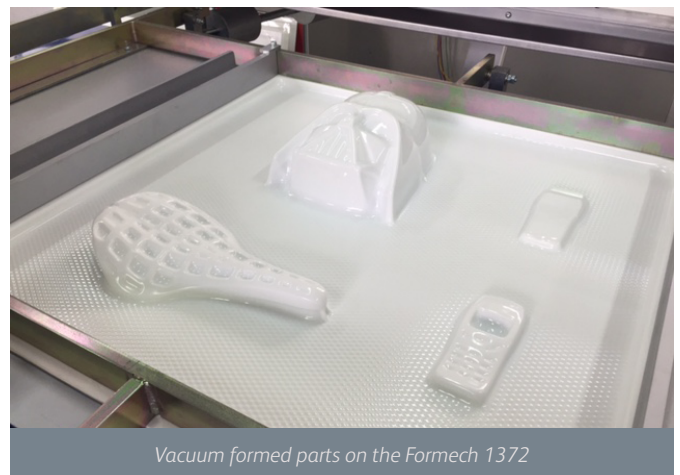

Formech's intuitive touch screen control system helps the inexperienced user get up and running in no time. It was great fun to see the enthusiasm from the GMI tutors in trialling new projects to capture the imagination of the students.

Formech's user friendly 1372 is a popular choice for leading education institutions throughout the world due to its extensive forming capabilities and accessible price.

It's always hugely rewarding for the Formech team to see vacuum forming education projects take shape on Formech machines, knowing today's students are tomorrows engineers!
