

# Formech & Humber College of Toronto

***Our American Head of Sales, Nic Neath, met with Tony Fiore, at Humber College.***

He is the technician for the industrial design program at Humber in Toronto, Canada. He is very knowledgeable about vacuum forming and fabrication in general.

A variety of different student industrial design projects at Humber College. Tony has set curriculum in which the students are challenged to learn the vac-forming process and become sufficient with the technology.

“The Formech sales staff I met at a local manufacturing tradeshow was professional, well-informed and capable of understanding my needs as an educator as opposed to their clients who deal primarily in manufacturing.

It’s not surprise that I’ve seen their equipment available for use at other educational institutions around the world.

They were able to direct me to a machine which both meets our needs and fit within our budget and it has proven to be a great investment based on feedback we’ve received from staff and students who are amazed with the increased quality of work produced by this new vac-former.”

Tony Fiore, Humber College.
