December 2014

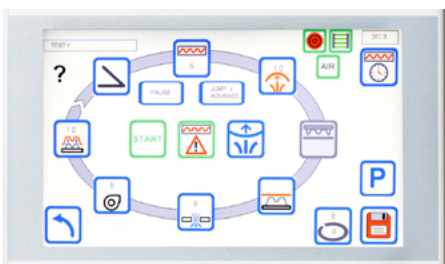

## Formech launches 'FCV' (Formech Cycle View) Machine Control Interface

Featured on all Formech automatic series and select semi-auto machines, 'FCV' (Formech Cycle View) introduces a new level of intuitive control. Designed to mirror modern control platforms such as tablets, IOS and Android devices the graphically driven interface is easy to understand and navigate for less experienced users.

*Ultra reliable, modular  
Wago PLC sits at the heart  
of Formech's FCV control interface*

*Formech Cycle View*

FCV provides the operator with an at-a-glance view of the machine status, whilst function icons are instantly recognisable and easy to manipulate in real time without interrupting the current cycle. Multi-lingual capability and a help prompt provides function descriptions in the operator's native language. A 40 pre-set memory allows operators to name, store and recall each project with all timings and values.

Operators can rapidly adapt heater profiles by defining a set point within 1 % increments and then tapping and grouping each element on the screen. A high performance option offers ultra-fine zone control with full feedback.

Optional advanced functions such as remote monitoring and password activation are available as required.

*Intuitive Heating Control*

Headquartered in the UK with branch offices in Germany and USA Formech designs and manufactures vacuum forming machines and ancillary equipment for prototyping, small series and production applications. With over 8,000 machines sold worldwide and 35 years experience, Formech is one of the most trusted providers of vacuum forming solutions.
